

Data Requirements Document

Online Shopping Platform (E-Commerce System)

1. Introduction

Once we listed out the main activities of the system, the next step was to figure out what data actually needs to be stored in the database to support those activities. We went through each activity and picked out the entities involved, along with the attributes we would need for each one. We have also marked the primary key for every entity, which is the field that uniquely identifies each record.

2. List of Entities

Based on the activities identified earlier (registration, browsing, ordering, payment and shipment tracking), the following entities were identified: Customer, Product, Category, Supplier, Order, Payment, Shipment, and Review. Each of these is described below with its attributes and primary key.

2.1 Customer

Attribute	Type	Notes
CustomerID	Primary Key	Uniquely identifies each customer
Name	Attribute	Full name of the customer
Email	Attribute	Used for login and notifications
Phone	Attribute	Contact number
Password	Attribute	Login password (stored securely)
Address	Attribute	Delivery address of the customer
RegistrationDate	Attribute	Date the customer signed up

2.2 Product

Attribute	Type	Notes
ProductID	Primary Key	Uniquely identifies each product
Name	Attribute	Name of the product
Description	Attribute	Short description of the product
Price	Attribute	Selling price
StockQuantity	Attribute	Number of units available
CategoryID	Foreign Key	Links to the Category entity
SupplierID	Foreign Key	Links to the Supplier entity

2.3 Category

Attribute	Type	Notes
CategoryID	Primary Key	Uniquely identifies each category
CategoryName	Attribute	Name of the category, e.g. Electronics
Description	Attribute	Short description of the category

2.4 Supplier

Attribute	Type	Notes
SupplierID	Primary Key	Uniquely identifies each supplier
SupplierName	Attribute	Name of the supplier/company
ContactNumber	Attribute	Phone number of the supplier
Email	Attribute	Email address of the supplier
Address	Attribute	Supplier's address

2.5 Order

Attribute	Type	Notes
OrderID	Primary Key	Uniquely identifies each order
CustomerID	Foreign Key	Links to the Customer who placed the order
OrderDate	Attribute	Date the order was placed
TotalAmount	Attribute	Total value of the order
OrderStatus	Attribute	Current status, e.g. placed, shipped, delivered

2.6 Payment

Attribute	Type	Notes
PaymentID	Primary Key	Uniquely identifies each payment
OrderID	Foreign Key	Links to the Order being paid for
PaymentMethod	Attribute	Card, UPI, net banking or cash on delivery
PaymentStatus	Attribute	Success, failed or pending
PaymentDate	Attribute	Date and time the payment was made
AmountPaid	Attribute	Amount paid for the order

2.7 Shipment

Attribute	Type	Notes
ShipmentID	Primary Key	Uniquely identifies each shipment
OrderID	Foreign Key	Links to the Order being shipped
ShippingDate	Attribute	Date the order was shipped
DeliveryDate	Attribute	Expected or actual delivery date
ShipmentStatus	Attribute	Packed, shipped, out for delivery, delivered
TrackingNumber	Attribute	Number used to track the shipment

2.8 Review

Attribute	Type	Notes
ReviewID	Primary Key	Uniquely identifies each review
ProductID	Foreign Key	Links to the Product being reviewed
CustomerID	Foreign Key	Links to the Customer who wrote the review
Rating	Attribute	Star rating given by the customer
Comment	Attribute	Text of the review
ReviewDate	Attribute	Date the review was posted

3. Conclusion

These eight entities and their attributes should cover the data needed to support the main activities of the online shopping platform. The primary keys marked above will help uniquely identify each record, and the foreign keys show how the entities are related to one another, which will be useful when designing the actual database tables.
